GB – ad hoc delete & refresh flow

GB – agreed approach

Agreed	Detail
Hub delete	Delete EIDs from single view consolidated and single view transient. Exclude code 45 from Hash ADV.
GB spoke delete	New job, bank pattern. Delete EIDs from the unified customer delta table. Customer level only.
Refresh	Update the member ETL timestamp in the raw event hub table for the member ID (all payloads). No curation change.
No manual path moves	ITF filter re-evaluates on replay and sets the record path.
